Pubic lice, or crab lice, infest pubic hair. They can also sometimes affect the hair of the armpit, eyebrows, eyelashes, beard and torso. The infection is also called pediculosis pubis and the lice are called Phthirus pubis.

Pubic lice are small, flat, light-brown parasites that cling to pubic hair and suck blood for nourishment. Blood sucking from pubic lice can cause small red areas or sores and itching.

Pubic lice are usually transmitted through direct skin-to-skin contact during sexual activity. However, they can also be spread by contact with towels, undergarments and bedding of an infected person.

Lice infestation causes no serious harm, but can be irritating. If you have pubic lice, it is a good idea to get tested for other sexually transmissible infections.

Symptoms of pubic lice

The main symptom is itching of the affected area. This is often worse at night. Lice and nits (eggs from the lice) can sometimes be seen, especially stuck to the pubic hairs.

Some people have no symptoms and may be unaware that they have a lice infestation.

Diagnosis of pubic lice

Pubic lice are diagnosed by careful inspection of the affected area.

Treatment of pubic lice

Applying topical creams or lotions containing permethrin (for example, Lyclear cream or Quellada lotion) to the whole body from neck to toes is the most commonly recommended treatment. You do not need to apply the cream to the hair on your head. See your doctor, pharmacist or sexual health centre for further advice.

Note: Do not apply permethrin to your eyelashes. If your eyelashes are affected, discuss alternative treatment with your doctor.

Treatment tips for pubic lice

You can treat pubic lice more effectively if you:

- read and follow the instructions on the medication carefully
- make sure your skin is cool, clean and dry when you apply the cream
- treat your whole body from neck to toes, including the perineum (the skin between the vagina and the anus) and the anal area. You don’t need to apply the cream to head hair
- leave the cream on overnight and wash it off the next morning
- wash clothing, towels and bedding at the same time as applying the treatment (hot machine washing and drying is sufficient)
• repeat the treatment after one to two weeks as it is not effective against unhatched eggs. Eggs hatch in 6–10 days
• avoid close personal contact until you and your sexual contacts or partners are treated.

Symptoms may take a few days to settle. If you still have symptoms one week after treatment, see your doctor for review.
Sexual partners should be treated for pubic lice

Any sexual partners you have had over the last month will need to be examined and treated. Current sexual partners should be treated at the same time that you are. Condoms do not protect you against pubic lice.

Where to get help

• Your doctor / GP
• Your school nurse or school welfare coordinator
• Some secondary schools provide access to an adolescent health trained GP on site
• Your local community health service
• Family Planning Victoria’s Action Centre Tel. 1800 013 952 or (03)9660 4700 (also is youth friendly)
• Family Planning Victoria Tel. 1800 013 952 or (03) 9257 0100
• Melbourne Sexual Health Centre Tel. (03) 9341 6200 or 1800 032 017 or TTY (for the hearing impaired) (03) 9347 8619
• Thorne Harbour Health (formerly Victorian AIDS Council) Tel. (03) 9865 6700 or 1800 134 840
• The Centre Clinic, St Kilda Tel. (03) 9525 5866
• Equinox Gender Diverse Health Centre Tel. (03) 9416 2889
• PRONTO! Tel. (03) 9416 2889
• Ballarat Community Health Sexual Health Clinic Tel. (03) 5338 4500
• Bendigo Community Health Sexual Health Clinic Tel. (03) 5434 4300 Or (03) 5448 1600
• Gateway Health Clinic 35, Wodonga Tel. (02) 6022 8888 or 1800657 573
• Sunraysia Community Health Services Tel. (03) 5022 5444
• Barwon Health Sexual Health Clinic Tel. (03) 5226 7489
• Victorian Supercare Pharmacies
• 1800MyOptions Tel. 1800 696784 is a statewide phone service for information about sexual health as well as contraception and pregnancy options
