Roseola infantum

betterhealth.vic.gov.au
Summary

- Roseola is one of the very common mild viral illnesses that affect children aged between six months and three years.
- The fine, raised, red skin rash and high temperature can last from a few hours to three to five days.
- The rash can sometimes be confused with measles or rubella.
- The major problem that may occur as a result of roseola is the risk of febrile convulsions triggered by the fever.
- Treatment options include plenty of fluids, paracetamol, rest and care at home.

Roseola infantum, more often referred to simply as roseola, is one of the very common mild viral illnesses that can cause a temperature and rash in babies and young children (aged between six months and three years).

Symptoms of roseola

The symptoms include:

- The child develops a high temperature of up to 40ºC (possibly higher), which usually lasts for a few hours, but may last three to five days.
- As the temperature falls, a raised, red rash appears – first on the body and neck, and later on the face, arms and legs.
- The rash lasts from a few hours to one or two days.
- Roseola may also cause a fever without the rash.
- Children with roseola recover fully, usually within a week.

Roseola is a member of the herpes family

Roseola is caused by one of the viruses in the herpes group, but this virus can’t cause other herpes infections, such as cold sores. It is not known how the virus is spread, although spread via saliva is suspected.

Roseola is most infectious while the child is unwell – from the start of the fever and including the time before the rash appears. Most children have been in contact with this virus by the time they are three years old.

Treatment for roseola

Treatment for roseola includes:

- Treat a fever over 38.5 °C with paracetamol, following dosage instructions for your child’s age and weight.
- Offer the child lots of water and drinks.
- It is best to keep any unwell child home from childcare or creche because the sick child needs extra attention, and the other children at the childcare centre or creche shouldn’t be exposed to the infection.

Complications of roseola

Roseola usually doesn’t cause any problems. Some of the complications may include:

- The rash can sometimes be confused with measles or rubella.
- Sometimes, roseola can lead to ear infections.
- The major problem is the possibility of febrile convulsions (fits triggered by a high fever), as the child’s temperature may rise very quickly. They rarely cause any ongoing problems.

Other complications of roseola are very uncommon.

See your doctor

If you are concerned about your child, always see your doctor for information, advice and treatment. You should also see your doctor if you are pregnant and your child, or someone else who you are in close contact with, has a rash illness. This is to make sure that you are not at risk of rubella infection or parvovirus B19 infection, as these can be difficult to distinguish from roseola without laboratory tests.

Where to get help

betterhealth.vic.gov.au
• Your doctor
• Maternal and child health nurse
• Pharmacist
• The Maternal and Child Health Line is available 24 hours a day Tel. 132 229.

Infection explained

- Beat the Bite
  Beat the Bite is a Victorian government health campaign to highlight awareness of the risk of mosquito-borne diseases in Victoria. Find resources to be printed and shared along with videos that tell...
- Chest infections
  A chest infection affects your lungs, either in the larger airways (bronchitis) or in the smaller air sacs (pneumonia).
- Fever
  A mild fever up to 39°C can actually help the immune system to get rid of an infection.
- Immunisation history statements for children
  By law, parents or guardians must provide an Immunisation History Statement when enrolling children in any childcare service, kindergarten or primary school in Victoria.
- Infection risk - cardiac surgery and mycobacteria
  Mycobacterium chimaera is a type of bacterium known as a non-tuberculous mycobacterium (NTM). There is a risk that heater cooler units (HCUs) used in cardiac (heart) surgery may be contaminated with...
- Infections – bacterial and viral
  Many bacterial infections can be treated with antibiotics, but they are useless against viral infections.
- Who provides immunisations in Victoria
  Immunisations in Victoria are provided by local councils, GPs and specially qualified nurses in medical clinics and community health services, some Maternal and Child Health nurses, travel clinics and...

Preventing infections

- Antibacterial cleaning products
  The Western obsession with cleanliness may be partly responsible for the increase in allergic asthma and conditions such as rhinitis.
- Beat the Bite! Mosquito-borne disease risk and management (video)
  Dr Finn Romanes, public health doctor at Victoria, Department of Health and Human Services explains the department’s program to monitor and manage the risks associated with Mosquitoes. Learn about the...
- Food safety while travelling
  Travelling, eating and drinking go together but unfortunately, traveller's diarrhoea and other food-related illnesses can sometimes come along for the ride.
- Handwashing - why it's important

betterhealth.vic.gov.au
Washing your hands with soap and warm water can help prevent the spread of infectious diseases.

- **Home tattooing**
  Home tattooing, or getting tattoos overseas, puts you at risk of serious complications that can be debilitating and life-long.

- **Immunisation history statements for children**
  By law, parents or guardians must provide an Immunisation History Statement when enrolling children in any childcare service, kindergarten or primary school in Victoria.

- **Kissing and your health**
  While disease-causing bugs can be transferred during a kiss, most won’t cause disease and the risk of serious disease is very small.

- **Personal hygiene**
  Good personal hygiene is one of the most effective ways to protect ourselves and others from illness.

- **Pets – safe handling of reptiles and tropical fish**
  People in contact with tropical fish and reptiles such as turtles, lizards, and snakes may be at risk of infections and illness due to germs (such as bacteria, viruses and parasites) carried on the...

- **Piercing**
  If you want to have your body pierced, choose an experienced, registered practitioner to reduce the risks of infection and scarring.

- **Preventing healthcare associated infection (HAI)**
  There are things you can do to reduce the chance of getting an infection while you are in hospital.

- **Quarantine at home - coping tips**
  You may be asked to quarantine yourself at home if you have developed, or been exposed to, an infectious disease.

- **Tattoos**
  If you want to get a tattoo, choose an experienced, registered practitioner to reduce the risks of infection and scarring.

- **Time to immunise - free vaccines for men who have sex with men**
  Immunisation is one of the best ways you can protect yourself and others from infectious diseases in our community. In partnership with Thorne Harbour Health (formerly Victorian AIDS Council), the...

- **Travel health and safety tips (slideshow)**
  We all love travelling to new and exotic places, but unfortunately illnesses and unforeseen events can ruin the trip of a lifetime. With a little effort, take a few of these simple precautions to make...

- **Travel immunisation**
  If you are travelling overseas, check with your doctor well in advance to find out what immunisations you need.

- **Vaccines**
  Vaccines trick the body into building immunity against infectious diseases without causing the actual disease.

- **Who provides immunisations in Victoria**
  Immunisations in Victoria are provided by local councils, GPs and specially qualified nurses in medical clinics and community health services, some Maternal and Child Health nurses, travel clinics and...

- **Workplace safety - infection control**
  The spread of many pathogens in the workplace can be prevented with regular hand washing.

**Managing infections**

- **Handwashing - why it's important**
  Washing your hands with soap and warm water can help prevent the spread of infectious diseases.

- **Medicines and side effects**
  Complementary medicines can interact with pharmaceutical medicines.

- **Medicines - safety issues**
  Make sure your doctor knows about every medicine you take, including vitamins.

- **Preventing healthcare associated infection (HAI)**
There are things you can do to reduce the chance of getting an infection while you are in hospital...

- Quarantine at home - coping tips
  You may be asked to quarantine yourself at home if you have developed, or been exposed to, an infectious disease...

- Workplace safety - infection control
  The spread of many pathogens in the workplace can be prevented with regular hand washing...

Childhood infections

- Beat the Bite
  Beat the Bite is a Victorian government health campaign to highlight awareness of the risk of mosquito-borne diseases in Victoria. Find resources to be printed and shared along with videos that tell...

- Boils
  Some areas of the body are more susceptible to boils, including the face, throat, armpits, groin and buttocks...

- Chickenpox
  Chickenpox is highly contagious, but it is generally mild and gets better without the need for special treatment...

- Coughing and wheezing in children
  Coughing and wheezing in babies can be distressing for you and your baby, but in most cases symptoms can be relieved at home...

- Croup
  Croup is a viral infection of the throat and windpipe that causes noisy breathing, a hoarse voice and a harsh, barking cough...

- Diphtheria
  Diphtheria is a serious bacterial disease that causes severe inflammation of the nose, throat and windpipe...

- Fever - children
  Fever is a way in which the body fights infection. A fever is not dangerous and does not always indicate a serious illness...

- Fever - febrile convulsions
  A febrile convolution is a fit that occurs in children when they have a high fever...

- Gastroenteritis in children
  Gastroenteritis or Gastro can be dangerous for very young babies. Gastro is common in young children and spreads easily. Gastro is a bowel infection which causes diarrhoea (runny or watery poo) and...

- Hand, foot and mouth disease
  Good personal hygiene is essential to prevent the spread of hand, foot and mouth disease to others, both for those infected and their carers...

- Impetigo - school sores
  Impetigo, or school sores, is a highly contagious skin infection that commonly affects school-aged children...

  Measles can cause serious and sometimes fatal complications, including pneumonia and brain inflammation...

- Measles, mumps, rubella, varicella (chickenpox) – immunisation
  Immunisation is the best protection against measles, mumps, rubella and varicella (chickenpox)...

- Melissa's story (video)
  Melissa shares her story of how her baby caught chickenpox at 5 weeks old...

- Meningitis
  Meningitis can cause death and requires urgent medical attention...

- Middle ear infections
  Middle ear infections often happen during or after a child has a cold...

- Mumps
  Mumps is a viral illness that causes fever and swollen salivary glands, and a swollen face...
**Roseola infantum**

Roseola is a mild viral infection with associated fever and rash that affects babies and young children.

**Rubella**

Rubella is a mild illness for most people, but very dangerous for pregnant women and their babies.

**Slapped cheek disease**

Children with slapped cheek do not need to be kept home from school or day care, as cases are only contagious before the onset of the rash.

**Streptococcal infection – group B**

Group B streptococcal bacteria can cause a wide range of illnesses in susceptible people including newborns, the elderly and those with pre-existing medical conditions such as diabetes or cancer. Out...

**Viral encephalitis**

Viral encephalitis is inflammation of the brain caused by a virus and can cause permanent brain damage.

**Whooping cough**

The major symptom of whooping cough is a severe cough, which is often followed by a 'whooping' sound.

**Whooping cough – a family’s experience (video)**

A family shares their experience when their baby daughter contracted whooping cough (or pertussis).

---

**Animal to human infections**

**Anthrax**

Anthrax is a rare but potentially fatal bacterial disease that occasionally infects humans.

**Australian bat lyssavirus (AHLV)**

The simplest form of prevention for lyssavirus is to avoid close contact with bats.

**Barmah Forest virus disease**

Barmah Forest virus (BENV) disease can cause joint inflammation and pain, fatigue and a rash of variable appearance. A full recovery can be expected. Most people recover completely within six months.

**Beat the Bite**

Beat the Bite is a Victorian government health campaign to highlight awareness of the risk of mosquito-borne diseases in Victoria. Find resources to be printed and shared along with videos that tell...

**Beat the Bite! Mosquito-borne disease risk and management (video)**

Dr Finn Romanes, public health doctor at Victoria, Department of Health and Human Services explains the department’s program to monitor and manage the risks associated with Mosquitoes. Learn about the...

**Bird flu (avian influenza)**

The symptoms of bird flu in humans are similar to those of regular influenza.

**Dengue virus disease**

Dengue virus disease (dengue fever, or ‘dengue’) is a viral disease transmitted by mosquitoes in many tropical and subtropical parts of the world.

**Hendra virus**

The best defence against Hendra virus is to avoid contact with an infected horse.

**Leptospirosis**

Leptospirosis is a disease spread from animals to humans, caused by infection with the bacteria Leptospira.

**Malaria**

Travellers who visit malarial locations should avoid mosquito bites and take anti-malarial drugs.

**Mosquitoes can carry diseases**

You can reduce the risk of mosquito bites if you get rid of potential mosquito breeding sites around your home.

**Murray Valley encephalitis**

The only protection from Murray Valley encephalitis (MVE) is to avoid mosquito bites.
Pets – safe handling of reptiles and tropical fish
People in contact with tropical fish and reptiles such as turtles, lizards and snakes may be at risk of infections and illness due to germs (such as bacteria, viruses and parasites) carried on the.

Pinworms
Despite the unsavoury reputation, a pinworm infection (worms) is relatively harmless and easily treated.

Psittacosis - parrot fever
People who have birds as pets, poultry workers and anyone working in aviaries or pet shops, are most at risk of catching psittacosis.

Q fever
Q fever is caused by a micro-organism that can be carried by cattle, sheep and goats.

Ross River virus disease
Most people recover from Ross River virus disease, although some people have symptoms for a year or more.

Tapeworms and hydatid disease
It's important for your own health to control tapeworm infection in your dog.

Toxoplasmosis
Problems only occur if a woman becomes infected with parasites that cause toxoplasmosis for the first time while pregnant.

West Nile virus
All disease-carrying mosquitoes breed in water or require water to enable eggs to hatch.

Zika virus
Zika virus is a mosquito-borne virus. There is no cure, specific treatment or vaccine for Zika virus.

A-Z of infectious disorders

Anthrax
Anthrax is a rare but potentially fatal bacterial disease that occasionally infects humans.

Aspergillus
Aspergillus is a fungus that commonly grows on rotting vegetation. It can cause asthma symptoms.

Australian bat lyssavirus (ABLV)
The simplest form of prevention for lyssavirus is to avoid close contact with bats.

Bacterial vaginosis
Bacterial vaginosis (BV) is caused by an imbalance of the bacteria normally present in the vagina.

Barmah Forest virus disease
Barmah Forest virus (BFV) disease can cause joint inflammation and pain, fatigue and a rash of variable appearance. A full recovery can be expected. Most people recover completely within six months.

Beat the Bite
Beat the Bite is a Victorian government health campaign to highlight awareness of the risk of mosquito-borne diseases in Victoria. Find resources to be printed and shared along with videos that tell...

Beat the Bite! Mosquito-borne disease risk and management (video)
Dr Finn Romanes, public health doctor at Victoria, Department of Health and Human Services explains the department’s program to monitor and manage the risks associated with Mosquitoes. Learn about the...

Beat the Bite mosquitoes - learn how to beat the bite (video)
Hear from Victoria's Chief Health Officer talk about how you can protect yourself from mosquitoes this season.

Bird flu (avian influenza)
The symptoms of bird flu in humans are similar to those of regular influenza.

Bites and stings – first aid
If you are bitten or stung by an insect or animal, apply first aid and seek medical treatment as soon as possible.

betterhealth.vic.gov.au
- **Boils**
  
  Some areas of the body are more susceptible to boils, including the face, throat, armpits, groin and buttocks.

- **Botulism**
  
  Botulism is considered a medical emergency. If untreated, it may cause death.

- **Buruli ulcer**
  
  Since the ulcer gets bigger with time, early diagnosis and prompt treatment of Bairnsdale disease can keep skin loss to a minimum.

- **Candida auris (C. auris)**
  
  Candida is a genus of fungi (yeasts) that live on the skin and inside the human body. Candida auris (also called C. auris) is an uncommon fungus that can cause serious infections.

- **Cellulitis**
  
  Cellulitis is a bacterial infection of the skin that occurs most commonly on the lower legs and in areas where the skin is damaged or inflamed.

- **Chest infections**
  
  A chest infection affects your lungs, either in the larger airways (bronchitis) or in the smaller air sacs (pneumonia).

- **Chickenpox**
  
  Chickenpox is highly contagious, but it is generally mild and gets better without the need for special treatment.

- **Chlamydia**
  
  Chlamydia is often called the 'silent infection' because most people do not realise they have it.

- **Colds**
  
  Cold viruses are spread by sneezing, coughing and hand contact.

- **Cold sores**
  
  Cold sores are blisters around the mouth and nose, caused by the herpes simplex virus.

- **Coughing and wheezing in children**
  
  Coughing and wheezing in babies can be distressing for you and your baby, but in most cases symptoms can be relieved at home.

- **Croup**
  
  Croup is a viral infection of the throat and windpipe that causes noisy breathing, a hoarse voice and a harsh, barking cough.

- **Cystitis**
  
  Cystitis is the most common urinary tract infection in women.

- **Cytomegalovirus (CMV)**
  
  If an unborn baby gets CMV from their mother, it can cause hearing loss and intellectual disability.

- **Dengue virus disease**
  
  Dengue virus disease (dengue fever, or 'dengue') is a viral disease transmitted by mosquitoes in many tropical and subtropical parts of the world.

- **Diarrhoea**
  
  Acute diarrhoea in babies and young children can be life threatening.

- **Diphtheria**
  
  Diphtheria is a serious bacterial disease that causes severe inflammation of the nose, throat and windpipe.

- **Ebola virus disease (EVD)**
  
  Ebola virus is a rare disease that can cause severe symptoms and can be life-threatening.

- **Epididymitis**
  
  Epididymitis is an infection that causes inflammation of the epididymis.

- **Eyes - trachoma**
  
  A clean face and clean environment are the best protection against trachoma.

  Endocarditis is an infection of the heart valves or the inner lining of the heart...

- Hendra virus
The best defence against Hendra virus is to avoid contact with an infected horse.

- **Hepatitis**
  - Hepatitis is an umbrella term for several diseases that affect the liver.

- **Hepatitis A**
  - Immunisation is the best protection against hepatitis A infection and it is recommended for people in high-risk groups.

- **Hepatitis B**
  - Hepatitis B is a viral infection that affects the liver and can lead to serious illness or death.

- **Hepatitis C**
  - In Australia, hepatitis C is most often spread through the sharing of unsterile drug injecting equipment. New all oral combination treatment has greatly improved health outcomes for people with hepatitis C.

- **Hepatitis C Cure - what it means for Victorians (video)**
  - Hepatitis C Cure - what it means for Victorians.

- **HIV**
  - In Australia, HIV is most commonly spread when having sex without a condom and when sharing needles and other injecting equipment.

- **Impetigo - school sores**
  - Impetigo, or school sores, is a highly contagious skin infection that commonly affects school-aged children.

- **Labyrinthitis and vestibular neuritis**
  - Labyrinthitis and vestibular neuritis are disorders that result in inflammation of the inner ear and the nerve connecting the inner ear to the brain.

- **Legionnaires' disease**
  - Legionnaires' disease is a rare form of pneumonia.

- **Leprosy (Hansen’s disease)**
  - Once a person with leprosy begins treatment they quickly become non-infectious.

- **Leptospirosis**
  - Leptospirosis is a disease spread from animals to humans, caused by infection with the bacteria Leptospira.

- **Malaria**
  - Travellers who visit malarial locations should avoid mosquito bites and take anti-malarial drugs.

- **Measles**
  - Measles can cause serious and sometimes fatal complications, including pneumonia and brain inflammation.

- **Meningitis**
  - Meningitis can cause death and requires urgent medical attention.

- **Meningococcal disease**
  - Do not leave young adults alone if they suddenly develop a fever because they may become seriously ill very quickly.

- **Molluscum contagiosum**
  - Molluscum contagiosum can be mistaken for genital warts or pimples, check with your doctor for an accurate diagnosis.

- **Mosquitoes can carry diseases**
  - You can reduce the risk of mosquito bites if you get rid of potential mosquito breeding sites around your home.

- **Mumps**
  - Mumps is a viral illness that causes fever and swollen salivary glands, and a swollen face.

- **Murray Valley encephalitis**
  - The only protection from Murray Valley encephalitis (MVE) is to avoid mosquito bites.
New drugs for the treatment of hepatitis C – Frequently Asked Questions for patients

In Australia, hepatitis C is most often spread through the sharing of unsterile drug injecting equipment. New all oral combination treatment has greatly improved health outcomes for people with...

Osteomyelitis

Osteomyelitis means an infection of bone which can either be recent or longstanding.

Parechovirus

Good personal hygiene is essential to prevent the spread of parechovirus to others, both for those infected and their carers.

Pericarditis

Pericarditis symptoms may be similar to those of heart attack and include chest pain and abnormal heart rhythms.

Pets – safe handling of reptiles and tropical fish

People in contact with tropical fish and reptiles such as turtles, lizards and snakes may be at risk of infections and illness due to germs (such as bacteria, viruses and parasites) carried on the...

Pinworms

Despite the unsavoury reputation, a pinworm infection (worms) is relatively harmless and easily treated.

Pleurisy

Treating any infection of the upper respiratory tract quickly will reduce the risk of developing pleurisy.

Pneumococcal disease

Pneumococcal disease is a leading cause of serious illness and death in young children.

Pneumonia

Anyone can get pneumonia, but young children and the elderly are most susceptible.

Polio and post-polio syndrome

Polio is a serious disease that can cause life-threatening paralysis and possibly death.

Psittacosis - parrot fever

People who have birds as pets, poultry workers and anyone working in aviaries or pet shops, are most at risk of catching psittacosis.

Q fever

Q fever is caused by a micro-organism that can be carried by cattle, sheep and goats.

Reactive arthritis

Reactive arthritis is a form of arthritis that occurs as a result of some bacterial infections.

Rheumatic fever

Untreated rheumatic fever can lead to serious complications such as rheumatic heart disease.

Roseola infantum

Roseola is a mild viral infection with associated fever and rash that affects babies and young children.

Ross River virus disease

Most people recover from Ross River virus disease, although some people have symptoms for a year or more.

Rotavirus

Rotavirus is a common cause of viral gastroenteritis for Australian babies and preschool children.

Rubella

Rubella is a mild illness for most people, but very dangerous for pregnant women and their babies.

Salpingitis

Salpingitis is one of the most common causes of female infertility and may permanently damage the fallopian tubes.

Septicaemia

Bacteria in the bowels, urinary tract, mouth and skin can cause disease if they get into the bloodstream.

  No Jab No Play – from 1 January 2016, all parents/guardians seeking to enrol their child at an early childhood service in Victoria must provide evidence that the child is fully immunised for their age.

- **Croup**
  Croup is a viral infection of the throat and windpipe that causes noisy breathing, a hoarse voice and a harsh, barking cough.

- **Fever - children**
  Fever is a way in which the body fights infection. A fever is not dangerous and does not always indicate a serious illness.
