Eating disorders
Summary

There is no single cause of eating disorders.

Body dissatisfaction, dieting, and depression are common risk factors for the onset of an eating disorder.

Eating disorders can be overcome with professional help and support from family and peers.

Eating disorders are serious mental illnesses. They can affect women and men of all age groups, from a range of backgrounds and from different cultures. Despite an increase in the incidence and understanding of eating disorders, many people live with these disorders for a long time without a clinical diagnosis or treatment.

Female adolescents and young women are most commonly diagnosed with an eating disorder, but men are also affected and are often under-diagnosed. Eating disorders are estimated to affect almost one million Australians.

Symptoms of eating disorders

There are some warning signs that are common to people with eating disorders. These may include:

- weight loss, weight gain or weight fluctuation, usually due to dieting, but sometimes from an illness or stressful situation
- preoccupation with body appearance or weight
- sensitivity to cold
- faintness, dizziness and fatigue
- increased mood changes and irritability
- social withdrawal
- anxiety or depression
- inability to think rationally or concentrate
- increased interest in preparing food for others
- obsessive rituals, such as only drinking out of a certain cup
- eating in secret
- wearing baggy clothes or changes in clothing style
- excessive or fluctuating exercise patterns
- avoidance of social situations involving food
- frequent excuses not to eat
- disappearance of large amounts of food from the refrigerator or pantry
- trips to the bathroom after meals
- constant and excessive dieting

Body dissatisfaction, dieting and depression are the most common risk factors for the onset of an eating disorder.

Types of eating disorders

The main types of eating disorder include:

- **anorexia nervosa** - characterised by restricted eating, loss of weight and a fear of putting on weight
- **bulimia nervosa** - periods of bingeing on high-kilojoule foods (often in secret), followed by attempts to compensate by over-exercising, vomiting, or periods of strict dieting. The bingeing is often accompanied by feelings of shame and being 'out of control'
- **binge eating disorder** - characterised by recurrent periods of binge eating (can include eating much more than normal, feeling uncomfortably full, eating large amounts when not physically hungry). Feelings of guilt, disgust and depression can follow binge eating episodes. Binge eating does not involve compensatory behaviours, such as for bulimia nervosa
- **other specified feeding or eating disorder (OSFED)** - feeding or eating behaviours that cause the individual distress and impairment, but do not meet the criteria for the first three eating disorders.

Causes of eating disorders

There is no single cause of eating disorders. It is currently agreed that a number of factors combine to cause eating disorders -- social, psychological and biological factors all play a part, in varying degrees, for different people.

Social factors

Contributing social factors may include:
media and other presentations of the 'ideal' body shape as slim and fit
pressure to achieve and succeed
peer pressure to be or behave in a certain way
a cultural tendency to judge people by their appearance
occupations or pursuits that emphasise a particular body shape and size - for example, ballet, modelling, gymnastics and elite sports.

Major life changes or events may also contribute to the onset of an eating disorder, including:

- relationship breakdowns
- pregnancy and childbirth
- the death of a loved one.

Eating disorders can also be triggered by the accumulation of many minor stressors such as:

- fear of the responsibilities of adulthood
- a belief that love is dependent on high achievement
- poor communication between family members.

**Biological factors**

Contributing biological factors may include:

- adolescence and its associated physical changes
- genetic or familial factors -- for example, families that are overtly focused on food, weight, shape and appearance.

**Psychological factors**

Contributing psychological factors may include:

- low self-esteem
- negative body image
- perfectionism
- depression
- anxiety
- impulsivity
- obsessive thinking
- difficulties expressing emotions.

**If you think you have an eating disorder**

Many people have problems with their eating. If you do have an eating disorder, get help. Remember that with professional help, eating disorders can be recovered from.

Getting professional help and support from others is important. Recovery may be slow as you learn to approach food in a more positive way and understand the reasons for your behaviour, but the effort will be worthwhile.

**Family and friends of someone with an eating disorder**

Parents, siblings, partners, friends, extended family, work colleagues and others often experience many different feelings as they learn to cope with the effects of an eating disorder on the person, and on their own lives.

The strain of living with an eating disorder can create tensions and divisions within a family. There may be feelings of confusion, grief, anger, guilt and fear.

Family and friends can remind their loved one that the effort associated with recovery will be worthwhile for everyone. The most important thing is to show love, care and faith in the person, and seek advice at the earliest possible time.

Some suggestions for family and friends include:

- Be honest and open about your concerns.
- Use 'I' statements rather than 'you' statements - for example, 'I am concerned for you because I have noticed you are not so happy at the moment' rather than, 'You aren't happy at the moment'.
- Focus on the person's behaviour, rather than their weight, food consumption or physical appearance.
- Try to take the focus off food and weight. The person with the eating disorder is already likely to be excessively focused on food and weight issues.
- Meal times should not be a battleground. Frustrations and emotions need to be expressed but not at mealtimes, which are already likely to be difficult.
- As much as possible, do things as you usually would. The person with the eating disorder needs to learn to co-exist with food and other people, rather than others learning to co-exist with the eating disorder.

**Treatment and recovery for people with eating disorders**

Many different forms of therapy are available and it is important to remember that different approaches work for different people. Finding the right approach and early intervention maximises prospects of recovery. Professional help and support from others is important.

Because eating disorder affect people physically and mentally, a range of health practitioners might be involved in treatment including psychiatrists, psychologists, GPs, dietitians, social workers, nurses and dentists.

• Soft drinks, juice and sweet drinks - children
Encourage children to drink and enjoy water. Sweet drinks such as juice, cordial and soft drinks may cause health problems for children if consumed in large amounts.

- Soft drinks, juice and sweet drinks – limit intake
  Consumption of drinks containing added sugar is associated with weight gain, reduced bone strength and tooth erosion and decay...

Vitamins and supplements

- 10 tips for getting enough vitamin D
  A balanced UV approach is required to ensure some sun exposure for vitamin D while minimising the risk of skin cancer.

- Antioxidants
  Antioxidants scavenge free radicals from the body's cells, and prevent or reduce the damage caused by oxidation.

- Calcium
  If you don't have enough calcium in your diet, your bones will eventually become weak and brittle.

- Folate for pregnant women
  Even women who aren't planning to have a baby should increase their folate intake in case of unplanned pregnancy.

- Iodine
  Good sources of iodine include fortified bread and any type of seafood, including seaweed.

- Iron
  Iron is important for transporting oxygen in the blood.

- Vitamin and mineral supplements
  Taking vitamin supplements is no substitute for a healthy diet.

- Vitamin B
  The eight B-group vitamins are essential for various functions within the body.

- Vitamin D
  A balanced approach to sunlight exposure will help you get enough vitamin D while protecting against skin cancer.

- Vitamin D - maintaining levels in winter (video)
  Vitamin D is important for healthy bones, muscles and the nervous system.

- Vitamins - common misconceptions
  There is no evidence that any one vitamin can slow ageing, restore sex drive or cure infertility.

Health conditions and food

- Arthritis and diet
  No special diet or 'miracle food' can cure arthritis, but some conditions may be helped by avoiding or including certain foods.

- Asthma and food allergies
  It is important to identify any foods or food chemicals that may trigger your asthma, but this must be done under strict medical supervision.

- Cancer and food
  Diet can influence your risk of developing some cancers, but there is no evidence that specific foods can cause or cure cancer.

- Cholesterol - healthy eating tips
  Replacing foods that contain saturated fats with foods that contain polyunsaturated and monounsaturated fats will help to lower your cholesterol.

- Coeliac disease and gluten sensitivity
  Coeliac disease is an immune disease caused by gluten.

- Diabetes and healthy eating
  Healthy eating for people with diabetes is no different than for everyone else.

- Eggs
The humble egg is a powerhouse of nutritional goodness. Eggs are full of things your body needs. They are a great source of protein, antioxidants, vitamins and minerals (such as vitamin A, vitamin D, ...)

Food allergy and intolerance
Food allergy is an immune response, while food intolerance is a chemical reaction.

Food poisoning - prevention
You can minimise the risk of food poisoning by taking simple precautions.

Getting enough protein
Protein is an important nutrient that helps your body grow and repair cells. Most Australians eat more than enough protein, but if you are vegetarian or vegan you may not be getting enough protein (or...)

Have you had an allergic reaction to packaged food?
The Food Standards Code requires that certain foods must be listed on the package of a food, or made known to the customer upon request. If you experience an allergic reaction to a known allergen not...

Health check
This health assessment questionnaire will identify which zones of your lifestyle are contributing to your personal health risk and provide actions you can take to make positive change.

Heart disease and food
A diet low in saturated fats and high in fibre and plant foods can substantially reduce your risk of developing heart disease.

Huntington's disease and diet issues
Weight loss is often associated with Huntington's disease, but it doesn't appear to be a direct result of diet.

Lunch at work
Did you know lunch is just as important as breakfast? In other words, don't skip lunch: you need it every day! A nutritious lunch will give you the energy to get through an afternoon of work.

Mood and food
Your mood can affect your food choices, and your food choices may affect your mood.

Pregnancy and diet
Good nutrition during pregnancy can help to keep you and your developing baby healthy.

Scurvy
Scurvy is uncommon in Australia but anyone whose diet is inadequate in vitamin C is at risk.

Type 2 diabetes - healthy eating and exercise (video)
People with type 2 diabetes talk about positive lifestyle changes that improve their quality of life.

Food science and technology

Carbohydrates and the glycaemic index
The glycaemic index (GI) can be a useful tool to control blood sugar levels.

Eggs
The humble egg is a powerhouse of nutritional goodness. Eggs are full of things your body needs. They are a great source of protein, antioxidants, vitamins and minerals (such as vitamin A, vitamin D, ...)

Fats and oils
Animal products and processed foods like fried fast food are generally high in saturated fats.

Food additives
The long-term effects of consuming a combination of different additives in our food are currently unknown.

Food - genetically modified (GM)
Some foods include ingredients that have been genetically modified (GM), or are made using ingredients derived from GM organisms.

Food irradiation
Food irradiation can kill insects, moulds and bacteria, but it cannot kill viruses.
Food labels

Food labels carry useful information to help you make good choices about food.

Food - pesticides and other chemicals

Chemicals such as pesticides, antibiotics and hormones are used to boost food production and ensure adequate food supply.

Food processing and nutrition

Careful cooking and storage will help retain the nutrients in your food.

Meat and poultry

Meat and poultry are a great source of protein and lots of other nutrients your body needs. Check your recommended intake of meat and poultry and try to stick with it.

Mercury in fish

Pregnant women and young children should limit consumption of fish that contain high levels of mercury.

Protein

The human body can't store protein, so it must be supplied daily from the foods we eat.

Salt

Too much sodium (salt) can cause high blood pressure and many other health conditions.

Sugar

Too much sugar in the diet can contribute to health problems, so limit foods and drinks with high amounts of added sugar.

Planning shopping and cooking

10 tips for healthy shopping

Make a shopping list for healthier food choices. 10 tips for healthy shopping.

Breakfast

Children who skip breakfast may lack sufficient vitamins and minerals including iron, calcium, zinc and vitamin B2.

Celebrations - Christmas Day the healthy way (video)

Victorian State Public Health Nutritionist, Veronica Graham shows us how to cook a light and healthy Christmas meal without overindulging. Whatever way you celebrate, there are ways to eat healthily.

Celebrations - healthy birthday parties (video)

Birthday parties can be healthy as well as fun. Flip Shelton reports on some great ideas for healthy and tasty treats for your child’s next birthday.
